

Investigate a metric drop, iteratively

THE SITUATION

Default move: build a list of hypotheses, bring to a meeting. Slow.
Better: treat it as an investigation.

My [metric] dropped [X%] between [A] and [B].

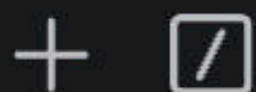

Here's what I know so far: [checked].

Here's the data I have: [list or paste].

What should I look at first?

Ask me clarifying questions if you need more.

WHAT WE GOT

Less like getting an answer.

More like a sharp analyst sitting next to you.
