

[USE CASE 7 / 7]

Build our internal dashboard. No BI tool. No code.

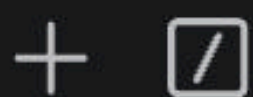

THE SITUATION

Data in a sheet is one thing.

Looking at it is another.

We didn't want to pull in a dev for an internal-only setup.

I have data in Google Sheets: [structure].
I want to visualize it as a dashboard.
I don't write code.
Here's what I need to see: [charts, metrics].
Build a dashboard that connects and updates.

Bypass permissions

WHAT WE GOT

HTML dashboard from Apps Script.

Shared with the team via link.

What took hours every week now just runs.
